

Team Capacity:

Liam Kressin: 10 hours

Shishir Shrestha: 20 hours

- Base: 10

DeWitt Colvin: 10 hours

- Base capacity 15 hours
- -5 for other class work

Sprint Goal:

The goal this sprint is to tidy up any outlying bugs or accessibility issues within the code. We also want to finish the documentation and automation for updates to the codebase within. If time is available for implementation and bug testing, a larger work queue would likely allow for more requests to be handled simultaneously by the system, though it for sure works currently on a small scale handling 10 requests a second.
